I am genuinely excited to be considered for a role where I can be a part of the development of something great. During my academic studies, I completed several challenging projects that required me to learn new languages, technologies, and skills as well as being a contributing member to many teams utilizing the Agile and Scrum methodologies. Not only did my studies hone my skills in designing and executing the architecture of a full stack project, but taught me how to succeed in a team setting when the only option was to work fully remote.

Furthermore, I have not stopped teaching myself the skills and languages needed to make a modern full stack application. I am continuing to practice competitive engineering problems every day through Hackerrank and using the linkedin learning tool to stay up to date on network and database management. I am a quick learner and possess excellent communication and teamwork skills, which allow me to effectively collaborate with colleagues and contribute to project success.

Thank you for taking the time to read this. I truly hope that I am the person you are looking for and I would welcome the opportunity to discuss my qualifications and how I can contribute to the success of your project. I look forward to speaking with you.

Sincerely,

Liam May
